ED 347 841 FL 020 516

AUTHOR Heston, Wilma
TITLE A Dictionary of Basic Pashto Frequency List I, Project Description and Samples, and Frequency List II.
SPONS AGENCY Office of International Education (ED), Washington, DC.
PUB DATE 14 Apr 92
CONTRACT P017A80076
NOTE 2,921p.
PUB TYPE Reference Materials - Vocabularies/Classifications/Dictionaries (134) -- Reports - Descriptive (141)

EDRS PRICE MF27/PC117 Plus Postage.
DESCRIPTORS *Dictionaries; English; *Grammar; Oral Language; *Pashto; Program Descriptions; *Sentence Structure; Uncommonly Taught Languages; *Word Frequency; Written Language

ABSTRACT

The three-volume set of materials describes and presents the results to date of a federally-funded project to develop Pashto-English and English-Pashto dictionaries. The goal was to produce a list of 12,000 basic Pashto words for English-speaking users. Words were selected based on frequency in various kinds of oral and written materials, and were to be accompanied by grammatical and other information needed for use in sentences. The 3-year project at Peshawar University (Pakistan) involved development of a million-word corpus and frequency lists derived from it. The final report includes: (1) a description of the project and its progress over 3.5 years; (2) information on compilation and structure of the textbase and frequency lists; (3) detailed description of the dictionary entries, orthography and pronunciation of the Pashto alphabet, dictionary abbreviations, and Pashto grammar; (4) Pashto-to-English dictionary samples in working draft, two-column format, and WordPerfect band format; (5) English-to-Pashto dictionary samples in working draft and two-column formats; and (6) two computer-generated and coded frequency lists, in separate volumes. Table of ASCII Characters

The following table represents the ASCII characters used for typing the Pashto texts included in the Frequency Tables. The same characters were also used to type the original dictionary in WordPerfect; the computer key, *b*, was typed to represent the Pashto letter ب, which sounds like *b* in English. The Frequency Tables were laser-printed from the University of Pennsylvania's mainframe computer. The Pashto letter ژ, which was typed as ^ (found above the number **6** on many computer keyboards) is printed as ¬ on the mainframe's laser printer used for Frequency List I and II.

Pashto	Phonetic	Keyboard	Pashto	Phonetic	Keyboard
ا	*ā (a,i,u)*	'	س	*s*	s
ب	*b*	b	ش	*š*	$
پ	*p*	p	ښ	*x̄*	X
ت	*t*	t	ص	*s*	S
ټ	*ṭ*	T	ض	*z*	Z
ث	*s*	#	ط	*t*	/
ج	*ǰ*	j	ظ	*z*	?
ځ	*ž*	J	ع	'	‘
چ	*č*	c	غ	*γ*	&
ح	*š*	C	ف	*f*	f
څ	*h*	H	ق	*q*	q
خ	*x̄*	x	ك	*k*	k
د	*d*	d	ګ	*g*	g
ډ	*ḍ*	D	ل	*l*	l
ذ	*z*	%	م	*m*	m
ر	*r*	r	ن	*n*	n
ړ	*ṛ*	R	ڼ	*ṇ*	nR
ز	*z*	z	ڼ	*ṇ*	N
ژ	*ž*	^	و	*w, u, o*	w
ږ	*ǧ*	G	ه	*h*	h

Other details:

آ	*ā*	"1	ی	*ā*	y¦
ې	*e,i,ay*	y	ۀ	*ə*	@h[2]
ۍ	*e*	E	◌َ	*a*	a
◌ُ	*u*	u	◌ِ	*i*	i

Typing and phonetic equivalents in final position:

ی[n]	*-i*	y	ی[α]	*-ay*	y
ے[n]	*-ay,-e*	e	ې[α]	*-e*	E
ي[α]	*-i*	Y	ۍ[α]	*-əy*[1]	I
ئ[n]	*-əy*	-@y	ئ[α]	*-əy*[2]	@y

---

[1] NB: This is two single quotes, not one double quote.

[2] In non-final position, *ə* is rarely written.

Frequency List I

The left-hand column of Frequency List I is the observation number in the first, second and last sections of this volume; this observation number is supplied by the Statistical Analysis Systems (SAS) program and is simply a number beginning with one in each section and increasing by one with each new word form. It is followed in these sections by the text word transcribed according to the Table on the following page; in the third section, there are no observation numbers and the left-hand column is the text word. The words are in the alphabetic order used by the SAS program: & $ ¬ / % ? ' # @ ' b c d e f g h i j k l m n o p q r s t u v w x y z [A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 0 1 2 3 4 5 6 7 8 9, rather than that of the Pashto alphabet on the ~~following~~ preceding page. The eight numeric columns from left to right represent the following categories of frequencies and the total frequencies for the volume as a whole:

Text Category	Frequency
All: Total of the following seven columns.	642,593
C1: Adult literary texts coded PA except for those included in Col. 2	306,150
C2: Adult Literary texts coded PA which have had one set of corrections.	85,853
C3: Newspapers coded W or B.	21,228
C4: TV scripts coded TV and one movie.	14,105
C5: Pakistani literary texts coded PM	15,073
C6: Folk texts coded F (see also Frequency List II)	106,564
C7: Afghan literary texts coded S and a fourth-grade reader coded AR.	93,620

Text references follow these frequencies and are enclosed by < and > . Bibliographic details for the reference codes are given in the Final Report's Project Description and Samples: Part II: Code List for the Frequency Volumes; the word counts on the Code List are calculated by WordPerfect, which defines a word somewhat differently than SAS. Part II of the Final Report also includes a description of the Method of Compilation; an explanation of certain kinds of errors is given in Part II: Annotation of a Frequency List.

As a casual glance through this volume will show, there are four different formats of column arrangements. The first section has a maximum of seven references with aligned columns and the third section has a maximum of eight references with an equal number of spaces between each column; the second and fourth sections have a maximum of eight references with aligned columns. When eight references took more than one 120-column line, the SAS program divided the line and put some of the references on separate lines of the same page.

Final Report

A Dictionary of Basic Pashto

Project Description and Samples

by Wilma Heston

April 14, 1992

PO17A80076

Abstract

The goal of this project was a pair of bilingual dictionaries (Pashto to English and English to Pashto) of 12,000 basic Pashto words for English-speaking users. The words were to be selected on the basis of the frequency of occurrence in various kinds of written and spoken materials. They were to be provided with grammatical and other information necessary for their use in sentences. The project was planned as a first step toward the long-range goal of preparing a 60,000 word dictionary which would be of sufficient scope to provide users with full access to dialect variants, to classical and contemporary literature and to specialized research topics.

This three-year project was done in collaboration with the Pashto Academy at Peshawar University in Pakistan. A textbase of over one million words was developed in computer format by Pakistani clerical staff; frequency lists were compiled from the textbase. These frequency lists have been made available to other users for teaching and research purposes; computer diskettes of the source texts in ASCII format are available on request.

The target goal of 12,000 Pashto headwords has been exceeded; the English entries also exceed 12,000. All the dictionary files are in computer format, offering possibilities for individualized user adaptation and providing for maximum flexibility in future expansion. The files have been laser printed and will be undergoing further editing. The Pashto Academy has expressed its eagerness to publish a camera-ready version of this dictionary when the final copy is ready. Printing and binding in Pakistan offers a cost-effective means of giving users a reasonably priced finished product.

Project Description and Samples

Part I: Final Report Description

Introduction

This project had three components to be developed in computer format: a million-word Pashto textbase, a Pashto to English (P-E) dictionary, and an English to Pashto (E-P) dictionary. The goal for the P-E dictionary was twelve thousand basic Pashto words; the words were to be selected according to their frequency in the textbase. The project was planned as the first step toward a long-run goal of a sixty thousand word dictionary which would provide users with full access to written and oral materials, classical and contemporary literature, folk texts and newspapers, and specialized research topics.

The report for this project consists of this volume plus two volumes of frequency lists. This volume contains a description of the work process, a description of the textbase and frequency lists, a draft of the grammatical introduction to the P-E dictionary, and samples of both the P-E and E-P dictionary drafts. Copies of the frequency volumes and the dictionary's grammar guide have already been circulated; user comments have been incorporated into the grammar. The dictionary files need some further editing before being circulated to various specialists. The long-overdue two-column formatting feature for the bi-directional software word-processing program has not yet arrived. When it becomes available, the dictionary files will be transferred to this format so that camera-ready copy can be prepared for publication.

Description of the Project's Work Process

September, 1988, through August, 1989: The original project plan called for establishing a computerized office in Pakistan during the first quarter of 1988 after a meeting of the Project Director (PD) with the project's senior consultant, Prof. D.N. MacKenzie, in Germany. The PD left the U.S. in mid-September, 1988, after a lexical program written especially for this project was completed. This program was presented as an M.A. paper by a graduate student of Dr. James Korsh in Temple University's Computer Science Department. It could perform many of the functions of the LEXWARE package written by Dr. Robert Hsu (University of Hawaii); in particular, it could convert band format data (see Part IV: 41-43) into paragraph format and count the number of entries. Both these features were extremely useful at the beginning of this project.

Before leaving the U.S., the PD had made arrangements to acquire a set of about 20,000 dictionary cards. These cards had resulted from a Pashto dictionary project under the guidance of Dr. Herbert Penzl and Dr. Oscar L. Chavarria-Aguilar which was funded by the U.S. Office of Education in the 1960's; the cards had been stored at the University of Michigan since that time. Permission to use the cards was requested from the directors of the earlier project through Prof. Gernot Windfuhr (then chairman of the Middle East Department,

University of Michigan) and this permission was granted. The bulk of the cards were Pashto entries; in working drafts of the P-E dictionary, entries for which the University of Michigan dictionary cards were used as either initial sources or as additional information have been marked Mi; examples can be seen in Part IV below.

During the meeting in Germany, Prof. D.N. MacKenzie discussed the project proposal and work plans with the PD in considerable detail; he also contributed several kinds of very useful material. Among these was a copy of Daulat Mohammad Ludeen's *Statistical Dictionary of the Pashto Language* (Pashto Academy, Kabul: 1974). The textbase for this statistical dictionary (SD) consisted of various kinds of Afghan texts and totaled about 200,000 words; the words are identified by part of speech but not by source. The influence of the Vietnam war on the Afghan press at the time of the list's compilation is quite clear; for example, ویتکانګی *vetkāngi*, a derivative of "Vietcong," occurs 58 times and is as common in this frequency list as وروڼه "brother." A bias due to context is, however, inevitable with any textbase, and the SD frequency list was utilized both as a initial source of headword entries and later as a convenient source for comparisons with the various textbase categories of this project.

Prof. MacKenzie also contributed a typed manuscript of an unpublished E-P dictionary with about 14,000 headwords. This manuscript, compiled in England by the late M. S. Durrani (d. 1966) with a preface dated 1958, was given by his son, Osman Durrani, to Prof. MacKenzie in 1967. Since the number of manuscript headwords was quite fortuitously about the size of the proposed target number of entries for the P-E dictionary, plans were made for a copy of it to be sent to Pakistan. The author of this manuscript had spoken a southern dialect; he thus included a number of words which were found to be unfamiliar to the northeastern dialect staff members of this project.

Prof. MacKenzie had already been using the bi-directional Multi-Lingual Scholar (MLS) software program selected for this project on the computer in Göttingen University's Iranian Seminar, and had devised a set of Pashto fonts which had been tested on their printers. These fonts were copied onto a diskette for use in Pakistan when a 24-pin printer had been purchased. Most of the keyboard mapping was congruent with the transcription system of this project, which facilitated the exchange of diskettes by mail.

When the PD arrived in Pakistan, she began organizing an office for the dictionary project there. This was the first time that computers had been used for humanities research at the University of Peshawar (or in Pakistan generally). Over the course of this project, newspaper articles were written about it, and a steady steam of Pakistani, Afghan and western visitors came to the project office for demonstrations of the capabilities of computers plus software with Arabic-based script capabilities. Visitors included the Director of the Pakistan's University Grants Commission, who later arranged an exchange visit for the PD to a university in Sindh, where a computerized picture dictionary project using image scanning had begun.

The Pashto Academy offered the dictionary project a large and secure room adjoining the office of its director, Prof. Nawaz Tair. Since Peshawar University buildings do not have central heating or air-conditioning, an air-conditioner which also functioned as a heater was purchased and installed after enlarging a window. New electrical wiring was added by the university; basic furniture including tables, chairs, and bookcases was provided by the Pashto Academy. The PD's Tandy computer, which she had purchased on a Fulbright grant the

previous year, was reclaimed for project use from Peshawar University's Computer Science Department; the PD's personal Toshiba 1200 laptop which she had brought along was also immediately available.

Following the advice of Peshawar University's Computer Science chairman, an Akhtar IBM-compatible XT-equivalent computer with a 20-megabyte hard disk drive was purchased. The Akhtar computers were sold by a British-based company which had a Peshawar branch convenient to the university if servicing was needed. An additional IBM AT-equivalent computer with a 40-megabyte hard drive was purchased later in the year when it was found that the Tandy machine did not support MLS software. All computing equipment was equipped with stabilizers; Pakistan's electrical current fluctuates constantly and often goes down completely; fortunately, the machines did not suffer damage from this, although the mornings without power because of "load shedding" slowed down the project's progress. If battery-operated computers, such as Toshiba or Zenith, and facilities for their repair had been available in Pakistan at that time, they would have been a better choice for computer work in Peshawar.

The search for Pakistani personnel began in late September, 1988. The Pashto Academy's Director, Prof. Nawaz Tair, indicated his interest in being directly involved in this project, and his request to Peshawar University's Vice-Chancellor for permission to do this was approved. Prof. Tair's Academy duties did not allow him to work full-time, so it was agreed that the Academy, whose usual work hours are eight a.m. to two p.m., six days a week, would be opened for project work in the evenings from four to eight p.m. It was also agreed that the Academy's car would be used for transport in the evening, since there was no public transport available and the area is not safe for nighttime travel by foot. A driver was found for a nominal wage, assuring that evening staff would arrive on time and return in safety.

The first person hired in addition to Prof. Tair during autumn, 1988, was Miss Raheela Begum, a word-processing teacher and social science researcher at the Northwest Frontier Province Agricultural University, where extensive computer training was being given by the U.S. Agency for International Development. Because Ms. Begum was already trained in word processing, she quickly learned the Pashto transcription system and began inputting material for the textbase within a day of starting work on the project in October, 1988.

Prof. Tair and a second evening staff person, Ms. Shaheen Akhtar, had not had any previous training in typing. Both of them began learning to type through the use of a computerized typing program previously purchased in the U.S. Ms. Akhtar worked at a salary adjusted for her lack of initial skill, and her pay was raised as these skills improved. Prof. Tair learned sufficient typing to help with dictionary inputs and also worked with the PD in collecting and organizing materials for the textbase.

There was some difficulty in finding daytime staff since the PD could not offer a permanent position. During November, two daytime staff members were hired. The first of these was Nasir Khan, a recent college graduate from Peshawar University, who had been teaching computers at a local business training school; he was given assurance of two years of employment. He already knew how to type and was eager to learn how to convert the files from band-to-paragraph format and, at a later stage, to MLS format. The second daytime staff hiring was Ashfaq Ahmed, another young teacher from the same business school, who was hired on a short-term basis. This completed the staff hiring for the first year of the

project; the computers were fully utilized from eight a.m. to eight p.m. except for lunch breaks, Fridays, and academic and religious holidays.

The work on the textbase began with the Pashto Academy's adult literacy texts; a list of titles and the related codes beginning with PA are included in Part II of this report. This set of about seventy booklets of about sixty pages each had been commissioned by Pakistan's federal government. These texts formed the bulk of the inputs for Frequency List I; they were selected because they cover a wide variety of subject matter but are written in simple style with basic vocabulary. Like most Pashto printed matter, the adult literacy booklets were handwritten and reproduced by a photo-offset process. The handwriting is large and fairly clear, as can been seen in the Sample Textbase Input (Part II: 3 of this report), which made typing of the texts relatively easy.

At the same time as these adult literacy books were being typed, the P-E dictionary input was begun using the word list in بمیادی پښتو او د کار کسب ټکی (Pashto Academy, Peshawar University, 1977 and later). This book of Basic Pashto (BP) had been used as a vocabulary guide for the authors of the adult literacy texts; it was thus a convenient way to begin the dictionary entries without a long delay for the completion of the textbase. The entries were first typed in WordPerfect, which is a simpler and more efficient word-processing program than MLS. The data was entered in a band format with different kinds of information on each line to ensure that inputs by all members of the staff would be uniform; examples of entries in band format are given in Part IV: 41-43. This information included the Pashto spelling of the headword, its pronunciation and part of speech, its definitions, and its use in various combinations and in illustrations. The final line of the entry included a notation as to the sources; examples of words marked BP can be seen in both the romanized band format and in the MLS format with Pashto script (Part IV: 2-37).

By mid-December, 1988, it was clear that the PD's planned stay in Pakistan of four months during the first and second quarter of this project would not be adequate for work to continue without her supervision for five additional months. She therefore decided to leave Pakistan during the winter break and return to Peshawar in January. By this time, a twenty-four pin Seikosha printer had been purchased to replace the nine-pin Epson printer lent to the project for the early months. It was therefore now possible to print files in the Arabic-based Pashto script of the MLS software package; however, the early versions of MLS were somewhat cumbersome, so the basic P-E entries continued to be made in the WordPerfect band format.

By spring, 1989, the dictionary inputs from the BP list of words were completed, and entries from the Afghan Statistical Dictionary (SD) began. This was somewhat slower, because the Pakistani staff did not know the meanings of some of the words on the Afghan list. Furthermore, the Afghan orthography was unfamiliar to most of the Pakistani staff; this created some difficulties with respect both to word genders and to definitions. The notation, SD, was used to indicate that the headword had appeared in the statistical dictionary; examples can be seen at the end of both the band format entries and the MLS format entries of Part IV.

Unlike the BP list which contained no proper nouns, the text-based SD list included proper names not only for the Pashto-speaking region but also for other parts of the world. A few of these words, such as Pakistan and Paris, have been included in the dictionary, as the P-E sample shows. In general, however, proper names for places outside the region have

been omitted, as have most names of persons. A separate list of proper names is being complied and can later be developed into a biographical and geographical appendix.

The typing of the adult literacy booklets was nearing completion in spring, 1989. The typing of newspaper texts was delegated to one staff member, who selected a series of article from two Pashto newspapers. The general subject matter of the articles is given in the Code List of Part II below; the newspaper word frequencies, with codes W and B, are included in Frequency List I. After these texts were typed, duplicate xeroxed copies of the texts were made for project use in the U.S.

In a first effort to get texts approximating spoken Pashto, Prof. Tair secured a bundle of TV scripts from Pakistan-TV's Peshawar station. Two of these were typed into computer format and are included in the totals of Frequency List I. The typing of these two scripts was extremely slow because they were handwritten in a fairly casual fashion; no further TV scripts were added to the textbase. A complete list of the scripts' titles and authors was later prepared and is available from the PD. The authors of some of the TV scripts are also important figures in contemporary Pashto literature; the TV scripts thus provide convenient material for analyzing the range of an author's work and can be made available to other users.

During spring, 1989, several sessions of dialect study were organized; Prof. Tair collected together groups of Pashto speakers from different dialect areas. The speakers' responses to various word lists were recorded on tape and the responses were transcribed. The process of transcribing responses was unexpectedly time-consuming, and further dialect work was deferred until the expected arrival in Pakistan of Prof. MacKenzie.

Before leaving Pakistan, the PD arranged for a visa and other necessary travel documents for Prof. Tair's trip to the U.S. A work schedule was organized so that typing of the textbase would continue through the summer; a variety of materials for Frequency List I were selected, including the folk texts coded F, literary texts coded PM, and portions of books coded AX.

The PD returned to the U.S. in April, 1989, before Ramazan, the Islamic month of fasting, began in Pakistan. When Ramazan was over, Prof. Tair came the U.S. to work on dictionary project for three months. An office in the University of Pennsylvania's South Asia Department was made available to the PD and Prof. Tair for the summer. During this time, Prof. Tair and the PD began adding the University of Michigan dictionary card information to the existing dictionary entries. This work was begun with the P-E files; the entries with additions are marked as Mi in the P-E dictionary samples of Part IV. It should be noted that although these cards were taken from textual material and examples were sometimes included on the card, they were not differentiated by dialect. The orthography therefore depended on the source of the texts and the dialect of the card writer; fortunately, the initials on many cards could be identifed so that appropriate adjustments could then be made for the varying orthography.

In another effort to get spoken language material, video-tapes of Pashto movies had been purchased in Pakistan and were then brought to the U.S. where the project had access to a VCR. One movie was transcribed during summer, 1989; it is included in the word counts of Frequency List I. Pashto movies, like Hindi/Urdu movies of the South Asian subcontinent, are several hours long and include an almost formulaic number of songs, dances and fights. The romantic scenes tend to be smiles from afar and the battle scenes include more minutes of gunshots and horses' hooves than dialogue. The dialogue itself has a high proportion of

names and imperatives, with not infrequent switches to English and Urdu, and the level of recording makes it generally difficult to understand each word of dialogue with the precision necessary for accurate transcription. Two movies were eventually transcribed for this project and are available for student use together with the typed text, but they did not seem to be a productive source of additional textbase material and were therefore not used further for this project.

In midsummer, 1989, the general conversion of the P-E files into MLS format began; the headwords and examples would then be in Pashto rather than romanized script. At that time, the conversion from WordPerfect ASCII format into MLS was done in two stages, first, through the Temple University program which counted entries and converted them into paragraphs without the identifiers used at the beginning of each line in band format, and next using the MLS Configurable Text Interchange Utility (CTIU) program to convert the relevant portions of the entries into Pashto and phonetic script. Samples of these texts were sent to Prof. MacKenzie, who had suggestions for improving the transcription and other features of the entries. In late summer, 1989, Prof. Tair returned to the Pakistan, and the remaining cards were boxed and sent for processing there.

September, 1989, through August, 1990: In September, 1989, the PD returned to Pakistan and was pleased to see that work on the textbase had continued during her five-month absence. In the same month, Prof. MacKenzie arrived in Peshawar for the two weeks of discussion that had originally been planned for summer of that year. He met the staff and reviewed the work procedures; his suggestions regarding computer file organization contributed greatly to more efficient handling of files on the project's machines.

A considerable portion of Prof. MacKenzie's time was spent in exploring dialect and grammatical variations. It was decided that attempts to use orally collected dialect variants would not contribute much of direct usefulness to a text-oriented dictionary, so no further work was done on transcribing oral dialect differences. It was also decided that the Yusufzai dialect of Prof. Tair and several other staff members did not demonstrate clearly enough certain vowel differences which were important for morphology; the PD therefore revised the transcription practices to reflect a normalized set of pronunciations that better distinguished these contrasts. Finally, it was decided that Afghan vocabulary and semantics were not being adequately represented, and an immediate search was begun for an Afghan who could participate in this project.

It might here be mentioned that the PD later learned that a Summer Institute of Linguistics (SIL) project which was directed by Dan Hallberg and which used an approach to Pashto dialect variation similar to that of this project was already in progress. The scope of the SIL project was far beyond what would have been possible for the dictionary project; the tentative SIL project results available in autumn, 1990, were extremely interesting linguistically from both a synchronic and diachronic point of view. In general, however, the results did not suggest any changes that might have been made in the compilation of the dictionary, but rather pointed to the impossibility of trying to cover all dialect variation in a one-volume dictionary. The practical choice of a normalized pronunciation with a limited number of variants had thus been a good solution to the dialect problem of this project.

As the textbase began to grow, the running of concordances on a text-by-text basis on the personal computers became increasingly unsatisfactory. The main problem was that the

concordances used far too much space on the hard disks and were generally not efficient in separating common words from less frequent words. During the previous spring and summer, the concept of a spell-checker had been developed and the PD had brought back from the U.S. a set of word lists run on the University of Pennsylvania's mainframe computer which separated words already included in the dictionary from words not yet included. Using these lists, almost all the words from twelve adult literacy texts were entered into the dictionary and the typing errors were corrected; these booklets later formed the corrected PA text category of Frequency List I.

This spell-checking approach used the Statistical Analysis Systems (SAS) program on the University of Pennsylvania's mainframe computer. Once data is transferred to the mainframe, the program's running time per text is very short; various parts of output can then be selected for later use and can be manipulated in other programs as well as downloaded to personal computers. Since humanists are rarely aware of the potentials of social science mainframe programs, a description of the process was submitted and published ("Word Frequencies, Comparisons, and Spell-Checks: A Statistical Package." Co-authored with B. Aten: *Association for Computers in the Humanities Newsletter*, Vol. 11-3: 11-12. 1989). It was decided at this time that since the intent of this project was to include high frequency words rather than to produce an completely accurate textbase, correction of each typing error in the textbase was not a productive use of resources. Texts were thereafter left uncorrected; examples of these can be seen in the Annotated Frequency List in Part II below.

In mid-autumn, 1989, work was begun on the E-P files. Following the P-E pattern of beginning with romanized transcriptions, the entire manuscript provided by Prof. MacKenzie was typed in computer format with its Pashto transcriptions modified to agree with the transcriptions of this project. Ms. Begum then typed in the Pashto forms of the words in transliteration; these files were then converted into MLS, so that the Pashto words would be in Pashto script as well as transcription.

By December, 1989, an Afghan, Dr. Guljan Wror Wardak, had been hired to supplement the Pakistani staff. Dr. Wror has a Ph.D. in Education from the State University of New York at Buffalo, and had been associated with Columbia University's education projects in Afghanistan. While developing grade-school textbooks for the Ministry of Education in Afghanistan, he had tried to develop materials that would be standard throughout the country; he was thus well-aware of the problems of dialect variation in Pashto. He has also written *Pashto Teacher* (پښتو ښود), a self-teaching book for English speakers who want to learn Pashto; this book was published in Peshawar in 1990, when he was working with the Pak-German Bas-Ed mission as well as this project.

Dr. Wror began going through the P-E files, checking all materials and adding Afghan Pashto words, spellings and definitions; unfortunately, Dr. Wror was not able to type, so other dictionary staff members had to add his emendations. To distinguish the Afghan words from the Pakistani words in cases where there seemed to be difference, the latter were marked by $^{\pi}$ and the former by $^{\alpha}$. This practice included not only definitions but also orthography. Some examples can be found on page 2 of Part IV; a short discussion of the orthographic differences in forms is given below in Part III: Pashto Alphabet.

In addition to hiring an Afghan for making additions to the dictionary files, a selection of literary texts written by Afghans were selected for inclusion in the textbase. These texts were taken from a journal that had been published in Kabul and had then resumed

publication under the direction of a refugee writers' group in Peshawar. The word counts for these texts are included in Frequency List I; the related references beginning with S (سپېدې) are included in the Code List of Part II of this report.

The autumn months of 1989 again proved too short for the PD to complete the expected work, so she returned to Pakistan again in spring, 1990. During the absence of the PD, one staff member had been using the computers for his own purposes and had introduced some viruses. Fortunately, the system of backups had been maintained and no material was lost; however, the process of diagnosing and removing the viruses considerably slowed down the amount of work completed during this period.

During spring, 1990, it became apparent that the spell-checking approach using a text-by-text treatment of the textbase was also becoming inefficient; each successive text yielded fewer new words and overall word frequencies were not readily available. It was therefore decided that on the PD's return to the U.S., all the texts thus far put into computer format would be grouped by source and included in a single frequency run. It was hoped that annotation of the frequency lists could begin after that.

Before leaving Pakistan in spring, 1990, the PD made arrangements for Ms. Raheela Begum to get leave from her university to come to the U.S. to work on the project during the summer. Visas and tickets were arranged for her and for Ms. Akhtar, who accompanied her and found support from sources other than this project.

During the summer of 1990, an office in the University of Pennsylvania's South Asia Department was again made available to the dictionary project. When Ms. Begum arrived from Pakistan, the compilation of Frequency List I was begun. Ms. Raheela helped in uploading text files to the mainframe, but despite attending computer classes, she was not able to grasp the principles of the SAS package. Most of her time was therefore spent in inputting additional data for the P-E files and adding information from the Mi cards to the E-P files; unlike the P-E files, no notation as to source was included for the inputs. Ms. Begum returned to Pakistan at the end of the summer and neither she nor Ms. Akhtar worked on the project after this. The PD finished Frequency List I herself so that she could take it to Pakistan on her return in autumn, 1990.

In July, 1990, while the PD was in the U.S., a conference on Pashto orthography had been held at Bara Guli in northern Pakistan; the conference attenders included writers and scholars from both Pakistan and Afghanistan. To the pleasant surprise of a number of skeptics (including the PD) who were aware of the fierce independence of the Pashtun character, the conference was successful in bringing about agreement on almost all points of difference. Conclusions of the conference are available in various publications including the Afghan publication, *Spede* (سپېدې), (July-August 1990: 28-30) and the Pashto Academy publication: پښتو لیکنار (1991); a brief explanation is also given in Part III: Pashto Alphabet, in this report.

September, 1990, through February, 1992: The PD returned to Pakistan to autumn, 1990, bringing a laser printer. As the files had increased in size during the previous spring and summer, the printing of dictionary files on the dot matrix printer was so slow that files were not being updated often enough; printing a single dictionary page took about five minutes on the 24-pin printer. With the introduction of the reasonably priced Hewlett-Packard IIp, a laser printer was within budget of this project sooner than expected and was therefore

this in MLS computer format and had added Pashto orthography as well as some grammatical information derived from the textbase. This sketch had already been checked by various staff members in Pakistan, and had been circulated informally to selected users. Much of Prof. MacKenzie's time in the U.S. was spent working with several Pashto informants to check particular grammatical points, discussing these points with the PD, and then rewriting the relevant sections. This Grammar Guide, which may still be expanded, is at present the most exhaustive modern sketch of Pashto morphology available, and the first to take account of variations in orthography. One noticeable difference from prior works is the lack of distinction between long and short vowels other than *a* and *ā*. There are also several peculiarities of Pashto syntax, such as the shift from masculine singular to a feminine plural, which are described for the first time in the Grammar Guide and which can be documented in the textbase.

In addition to working on the Grammar Guide and discussing the progress of the dictionary files, Prof. MacKenzie suggested using the mainframe frequency files as inputs in the Oxford Concordance Program and then alphabetizing the frequency list in Pashto rather than mainframe alphabet order. This was done for word orders starting both at the beginning of the word and also starting at the end of the word; the latter is particularly useful for comparing words with similar grammatical forms. Copies were printed on 120-column computer paper for use by Prof. MacKenzie and the PD; diskettes of these indexes can be provided to other users.

The words were also sorted into various frequency categories as a convenient way to make sure that high frequency words were included in the dictionary. Because Pashto is a highly inflected language, some words are quite scattered in their various inflected forms; without complete annotation, as in Part II's Annotation of a Frequency List, collecting all occurrences of a particular word can be very time-consuming, especially for verbs which have prefixed and separable parts. Nevertheless, except for proper nouns, most word forms with a frequency equal to or greater than five in Frequency List I have been included in the dictionary.

During autumn, 1991, the PD organized the material for Frequency List II. Some of this material had been typed in computer format for two projects other than this dictionary project; the transliteration schemes and source coding systems for those projects was somewhat different than that used in this project. The material first had to be converted into this project's format; the resulting frequencies are given in the columns labeled C1 through C4 for classical literature and C6 for folk literature. The southern dialect material typed in Pakistan was included in C5 of Frequency List II and a small number of Pakistani literary texts typed in Pakistan but not been included in Frequency List I were added in C7.

Considerable work still needs to be done in integrating the high frequency words of Frequency List II into the dictionary. During this process, Frequency List I and II should also be merged to provide a convenient single source for total frequencies and suggest directions for word searching; this is expected to be completed by June, 1992. As an examination of the Annotation of a Frequency List in Part II will show, orthographic variations can lead to the mixing of two different forms in a single frequency calculation. Ideally, at least one set of corrections to the texts should also made and then the whole set of frequencies should be re-computed. That task, however, is far beyond the time and resources of this project.

purchased and taken to Pakistan.

When the PD arrived in the Peshawar project office, she found that neither the dictionary files nor the computers themselves had been properly maintained in her absence. After getting the machines in working order, much of the PD's time during autumn, 1990, was spent reorganizing files to determine what work had been completed on each file, and deciding which of the numerous gaps should be filled in first.

The resolutions of the Bara Guli conference also necessitated a systematic checking and the rewriting certain entries; this process was begun during autumn, 1991. The resulting dictionary will be the first to have headwords written in a form agreed upon by scholars and writers from both countries.

During autumn, 1990, Dr. Qabil Khan, a recent Peshawar University Ph.D. in modern Pashto literature, was hired to begin editing of the E-P files; he is an English teacher in Peshawar University's best-known college and wrote the first dissertation in English on Pashto literature. He began working on the E-P files, entering Pakistani Pashto words in consultation with Prof. Tair and later assisting with the entries written in by Dr. Wror.

At various times, it had become clear that southern dialects of Pashto, whether from the Quetta region in Pakistan or Qandahar region of Afghanistan, were not adequately represented in the textbase. A former staff member was therefore hired on a piecework basis to type a selection of literary texts published in Quetta. These texts with codes UL(A) and ABS are included in the word counts of Frequency List II.

Because of the problems during the previous summer when work was not completed in Pakistan while the PD was in the U.S., the Pakistan portion of the dictionary project was closed down when she returned to the U.S. in December, 1991. The now fully utilized University of Michigan dictionary cards were shipped back to the U.S., where they are now being kept in an office of the University of Pennsylvania's Middle East Studies Center. Copies of publications used for the project's textbase were collected for xeroxing in the U.S., and the computers were transferred for safekeeping to Peshawar University's Computer Science Department until the return of the PD.

The decision to close down the Peshawar office during the PD's absence proved fortunate as the political situation in the Gulf continued to escalate; not only was travel to and from the region a risky matter, but non-essential government personnel were sent out of the country and U.S. citizens were advised against staying in Pakistan. The situation is now calmer, but political problems related to Afghanistan continue to pose some danger for Americans in the Peshawar area.

Before the PD left Pakistan in December, 1990, she had made arrangements for Dr. Qabil Khan's travel to the U.S.; he arrived in Philadelphia after his teaching duties ended in May and stayed for four months. An office in the University of Pennsylvania's Department of Oriental Studies was available for the summer, and work on the dictionary files continued there.

Since various people had worked on the files and since the orthographies had changed after the Bara Guli conference, a number of inconsistencies still remained in both the P-E and E-P files. Dr. Q. Khan began working in Philadelphia to bring more consistency to the files, going through all the P-E files, checking and emended all the grammatical information; this took about two months. He then went through the frequency files and added a notation in the P-E files for words which occur in Frequency List I. This took about a month, and

was a fairly slow task; in the process, some simplification took place, introducing two kinds of possible errors with respect to source notation. First, a distinction was not usually made between various words with the same spelling. In developing the P-E dictionary, words of different meanings but the same spelling were included even if they had not yet occurred in the textbase and were uncommon. Since searching for an example of a rare word can be extremely time-consuming when its homograph is very common, headwords of the same spelling have generally been given an F1 notation in the dictionary draft although one meaning or another may not yet have occurred in the texts themselves. This was intended both to remind the staff to check at a later time for the various meanings and also to make a step toward the long-run goal of a 60,000 word dictionary. Second, little checking was done on whether a particular word was an inflected form of another headword or was a headword form itself. Allocating each word to a particular headword is an extremely time-consuming task, and was not possible on this project; an example of the amount of detail necessary for this process can be seen in Part II: Annotation of a Frequency List, in this report.

During summer and autumn, 1991, copies of the *Pashto Monthly* and *Spede* texts were also xeroxed in duplicate for use by the PD and Prof. MacKenzie. Some of the Pashto texts had not arrived from Pakistan, and the PD has not been able to find any copies in the U.S. A few gaps therefore remain in the Code List of Part II, but the PD has reserved funds for a final trip to Pakistan both to oversee the final publication and to collect copies of the remaining textbase originals. For the most part, however, there should now be copies available in both the U.S. and Europe for all text source materials and computer input diskettes.

Until summer, 1991, most of the E-P file work had been additions of single Pashto words to the English word list in the Durrani manuscript. Although a base of about 14,000 English words seemed sufficient to ensure generally adequate coverage, additional sources were checked not only for coverage of basic headwords but also to ensure the inclusion of phrases as well as single words in English. Furthermore, the E-P entries lacked examples that would be helpful for the English-speaking user. After discussions with University of Pennsylvania faculty who teach teachers of English as a second language, *A General Service List of English Words* (GSL) compiled and edited by Michael West (Longman: 1953 revised edition; printed in Hong Kong, 1983) was selected as a useful guide. Dr. Q. Khan, who had not only taught English literature but also had taught English language classes to students whose native language is not English, began working through GSL entries. For the working draft, E-P entries for which GSL material was added are marked as indicated in the first footnote of Part V. As that sample shows, the entries using GSL material are generally much deeper than other entries of the sample.

Dr. Q. Khan did not have time to complete the GSL additions to the P-E files during his stay in Philadelphia. He returned to Pakistan with a portable computer of the PD, intending to complete these additions there. By January, 1992, however, he had finished only a small portion of the remaining work and the computer was returned to the U.S. These additions are now being continued in Philadelphia by another Pashto speaker working part-time under the direct supervision of the PD and should be completed in early May.

During July, 1991, Prof. MacKenzie came to the U.S. for further consultation on the project. Before this project began, Prof. MacKenzie had provided the PD with a grammatical sketch in transliteration which he had long used for teaching purposes. The PD had typed

Conclusion

A major conclusion of this project is that the preparation of a textbase in Pakistan is quite feasible during the allotted time-frame. With the rapidly improving computer technology in Pakistan, it should be easy and cost-efficient to carry out such a project for other Pakistani languages with handwritten texts which are not machine scannable. Furthermore, as the capacity of personal computers increases, it will soon be possible to use personal computers in Pakistan to run the SAS programs that required a U.S. mainframe for this project. The present time is thus ripe for developing linguistic and literary textbases for future research in Pakistani languages.

The problems associated with producing a bilingual dictionary in Pakistan are somewhat more complicated. At present, Pakistan offers no academic programs in modern linguistics or historical philology; very few Pakistanis have chosen to specialize in linguistics when studying outside their country and those who have returned have generally not been in a position to use their acquired skills for research or teaching.

Until trained linguists from Pakistan are available for dictionary projects, the burden of both the supervisory and the substantive work of bilingual dictionaries will be entirely on the participating American(s). The cooperation of the Pashto Academy and its director has certainly been as much or more than could be expected, but the lack of staff with background in linguistics and western research techniques has been a continued problem. This dictionary is thus not ready for publication within the time-frame of the project and, as the samples of this report will show, still needs further editing. However, the bulk of the project's work has now been completed and the editing is in the final stages.

When this editing has been completed, copies of the manuscript will be sent to selected readers for further checking, their corrections will be added, and the manuscript will be formatted for camera-ready copy. The manuscript will then be submitted to the Pashto Academy for publication, and printed copies can be distributed through outlets in the U.S. and Pakistan.

Part II: The Textbase and Frequency Lists

Method of Compilation and Column Definitions

The textbase inputs began with a series of adult literacy booklets and continued through a wide range of materials including folk texts, newspapers, modern and classical prose and poetry, and television scripts. Both southern dialects and the northeastern dialect of Kabul and Peshawar region were represented. The inputs were typed with text source codes and page numbers for identification; the Code List for the Frequency Volumes in this part of the Final Report gives further bibliographic information about these sources.

The computer inputs were typed in transliteration (i.e., one roman letter for each Pashto letter) directly from the texts, thus avoiding errors which might result from copying into transcription prior to typing. The project's transcription system was devised in such a way that the same computer key was used for the transcription, the phonetic alphabet used in the dictionary, and the Pashto script. For example, a retroflex t was typed as a capital T in the textbase, and the same key would be *ṭ* in the phonetic alphabet and ټ in the Pashto alphabet. An example of a Pashto text with the resulting computer input is given in the Sample Textbase Input in Pashto and Transliteration below; the Pashto text has been reduced from its original size of about seven by ten inches. The Table Used for Typing Computer Inputs follows the example; it is in the Pashto alphabetic order used in the dictionary.

The frequency lists were run in two sets, one during summer, 1990, and the other during autumn, 1991. The lists with the frequencies by categories and at least one reference for each category of occurrence were laser-printed; they are included in two separate volumes, Frequency List I and Frequency List II, accompanying this report.

In producing these Frequency Lists, groups of texts were first uploaded to the University of Pennsylvania's IBM mainframe computer on which the Statistical Analysis Systems program is resident. Each category of texts was uploaded separately; when the number of texts was very large, the category was divided into subsets. In Frequency List II, for example, the text inputs used for the frequency counts given in C1 to C7, respectively, were uploaded in the following way:

C1: classical texts with the code PX were divided into four subsets.
C2: classical texts with the code RB were divided into two subsets.
C3: classical texts with the code HB were divided into two subsets.
C4: classical texts with the code ALIX were kept as a single set.
C5: southern dialect texts with codes ULA(S) and ABS were divided into three subsets.
C6: folk texts with the code F which were not included in Frequency List I were divided into two subsets.
C7: Pashto Monthly texts with the code PM which were not included in Frequency List I were kept as a single set.

The columns with the reference labels, REF1 through REF7, will have a reference from

each of the above text categories in the above order when, and only when, a word has occurred in each of those categories. For example, 'ws in Frequency List II has seven text references; the references are in the above order, C1 through C7, when they appear in the Frequency List columns labeled REF1, REF2 . . . REF7.

When a word occurs in only one category, the number of references will equal at most the number of subsets into which the category was divided; these references will be listed beginning in the REF1 column regardless of whether the word came from the C1 or the C7 category. For example, there are four PX references for &mzy, showing that this word occurred in each of the four subsets of PX; these references are listed as REF1 through REF4.

The number of references for any category will be less than the number of subsets if it did not appear in all the subsets. For example, &lym'n appeared in only three of the four sets of PX, and thus has only three PX references despite a total frequency of five; &lym'n must therefore have occurred more than once in at least one of PX subsets. Similarly for C2, which was run in two subsets, there will be at most two RB references, no matter how many times a word occurs. For example, $a occurs 60 times, but only two RB references are given; these appear as REF1 and REF2. These two references are sufficient to establish that this word is simply an orthographic variant used in the text RB for a word that would in standard orthography be transcribed as $h. For the folk texts' &zn, which occurs 32 times, there is only a single reference and it is listed under REF1. This reference is here adequate for establishing &zn as a personal name that recurs repeatedly in the popular story coded FRX.

These Frequency Lists thus do not give repeated references from the same text or category of texts. Instead, they give a selection of references that are as diverse as the textual materials in which they occur. There are still occasions when additional references are needed; for this purpose, the use of Norton Utilities text search command with diskettes of the text inputs has been fairly efficient. The Frequency Lists thus provide an overall view of the distribution of particular words, a convenient source of selected text references, and a guide to the locations of a full set of text word occurrences.

Sample Textbase Input in Pashto and Transliteration

In the following sample, the underlined words (p'&wnde and p'&wndh) in the sample's last line can also be found near the top of the annotated frequency list in this part of this report. Since both words are on page 27 of the same text, they have the same identification code, <PAPNB:27>; the Code List at the end of Part II of this report gives the title and author of PAPNB.

The words in boldface type type in the sample illustrate typing errors of a kind that would not be noted by T in the Annotation of a Frequency List in this report. The first (**&wr wy**) has added a space where there should be none; the second (**trynh**) has omitted a space, consistent with the orthography used for the same sequence two other times on the same page. The third was an omission of the common particle, **lh** ; this omission barely affects the frequencies, since there are already 2623 occurrences of lh in Frequency List I. It might also be noted that the typist has added commas which are not in the original text; the SAS program was set up to delete commas and periods from the words to which they were attached.
